yehiayes20@gmail.com | +201010841832 | Linkedin | Github
Military Status: **Exempt**

EDUCATION

Faculty of Engineering - Ain Shams University (ASU) - Dual Degree with University of East London

- *Bachelors in Computer Engineering*
- ***Start Date:*** *October 2020*
- ***Graduation Date****: June 2025*
- **Cumulative GPA:** 3.77
- Ranked **4th** in class

SKILLS

Programming Languages: C, C++, Java, Python, HTML, CSS, JavaScript, PHP, Dart, SQL
Software Skills: OOP, Data Structures, Design Patterns, Socket Programming
Version Control: Git and Github
OS Familiarity: Windows, Linux

Training

AI & ML Summer Program (10/2022 - 11/2022)

- Offered by **Sprints**
- Certificate

Software Testing Training by NEXT Academy (10/2023 - 11/2023)

- Fundamentals of Testing
- White / Black Box Testing
- Tested a real-life website (Exploratory Testing)
- Certificate

Classical AUTOSAR Diploma by Siemens (07/2024 – 09/2024)

- AUTOSAR Layered Software Architecture
- AUTOSAR OS
- AUTOSAR Communication Stack
- AUTOSAR Diagnostics
- Bootloader
- Certificate Link

GRADUATION PROJECT

A Framework for Secure and Efficient Over-the-Air Updates (OTA) for Software-Defined Vehicles (Sponsored by Ejad)

- Developed a secure and efficient Over-the-Air (OTA) update framework for SDVs, enabling remote software updates for safety-critical ECUs and Linux-based systems.

- Designed a secure bootloader, implemented UDS-based flashing, and integrated cybersecurity measures (authentication and integrity verification).

PROJECTS

Banking System (Java)

Software Testing Project whose main objective of this project is to design, implement, and test an online banking system that provides users with features for managing their bank accounts, performing transactions, paying bills, and providing payment and transaction history.

Project Included:

- GUI using JavaFX
- Unit Testing using Junit4
- Performance Testing

Github: https://github.com/Kerolos-Noshy/Testing_Project

Gifting App (Dart)

A **Flutter app** about adding your own events and listing your wanted gifts that your friends can see and pledge them for you
It includes features like:

- Developing Front-end for screens
- Integration with local SQLite DB to store user's data
- Integration with firebase authentication and real-time database for real-time updates
- Integration Testing of the application

Github: https://github.com/DevYehia/Hediaty-Gifter

Kind Quest (PHP)

A charity website which helps in events organization and donations, this was the **Design Patterns Course** project where we applied many design patterns like Decorator, Observer, Proxy and many other design patterns.
Github: https://github.com/Moisis/KindQuest

Distributed Image Processing (Python)

An application to perform image processing operations using **multiple servers** and a **load balancer** to distribute the load among them.
Github: https://github.com/DevYehia/DIstributed_Image_Processing

Home Hazard Detection System (C)

Embedded Systems Project that included working with: Ultrasonic Sensor, Fume Sensor and Bluetooth Module to send hazard info to mobile phone, we used a sender board (**Tiva-C**) to detect hazards and a receiver Microcontroller (**Atmega32**) to start an alarm
Github: https://github.com/DevYehia/Hazard-Detection-System
